

Project Development Phase

Tableau Performance & Visualization Testing Report

Date:	30 September 2026
Team ID:	SWTID-2026-1128
Project Name:	Auto Ticket Classification using Flow Designer
Maximum Marks:	10 Marks

1. Tableau Performance & Visualization Testing Overview

This report documents the performance testing and evaluation of Tableau visualizations built for tracking ticket resolution performance and quarterly ticket inflow. The model template details data rendering speed, preprocessing steps, filter utilization, calculated fields, dashboard layouts, and Tableau story sequencing.

2. Tableau Model Performance Evaluation Matrix

S.No.	Parameter	Screenshot / Values & Technical Details
1	Data Rendered	- Data Sources: Cleaned ticket management dataset containing Category, Ticket Inflow, and Resolution metrics. - Total Records Processed: 5,300+ total historical ticket records rendered across all categories. - Rendering Latency: Real-time interactive dashboard refresh under 1.2 seconds.
2	Data Preprocessing	- Data Cleaning: Removed duplicate ticket IDs, imputed missing resolution timestamps, and standardized category names (Hardware, Software, Network). - Data Transformation: Aggregated monthly ticket entries into Quarterly buckets (Q1 - Q4).
3	Utilization of Filters	- Category Filter: Multi-select dropdown filtering by Hardware, Software, and Network. - Time Range / Date Filter: Quarterly & Annual date slider for dynamic timeframe selection. - Context Filters applied to optimize extract query speed.
4	Calculation Fields Used	- Resolved Count: $SUM(IF [Status] = 'Resolved' THEN 1 ELSE 0 END)$ - Resolution Rate (%): $[Resolved Count] / COUNT([Ticket ID]) * 100$ - Quarterly Growth Rate: $(SUM([Total Tickets]) - LOOKUP(SUM([Total Tickets]), -1)) / LOOKUP(SUM([Total Tickets]), -1)$
5	Dashboard Design	- No. of Visualizations / Graphs: 3 Interactive Views - Key Visuals: Bar Chart for Category Resolution (Hardware: 420, Software: 390, Network: 435), Executive Summary KPIs, and Dynamic Filter Panel.
6	Story Design	- No. of Visualizations / Graphs: 4 Story Points / Narrative Views - Key Visual: Quarterly Ticket Inflow Line Chart tracking growth from

S.No.	Parameter	Screenshot / Values & Technical Details
		Q1 (1,100 tickets) up to Q4 (1,550 tickets).

3. Tableau Visualizations & Analytics Output

The generated charts below correspond directly to the Tableau Dashboard and Tableau Story visualizations captured during performance testing:

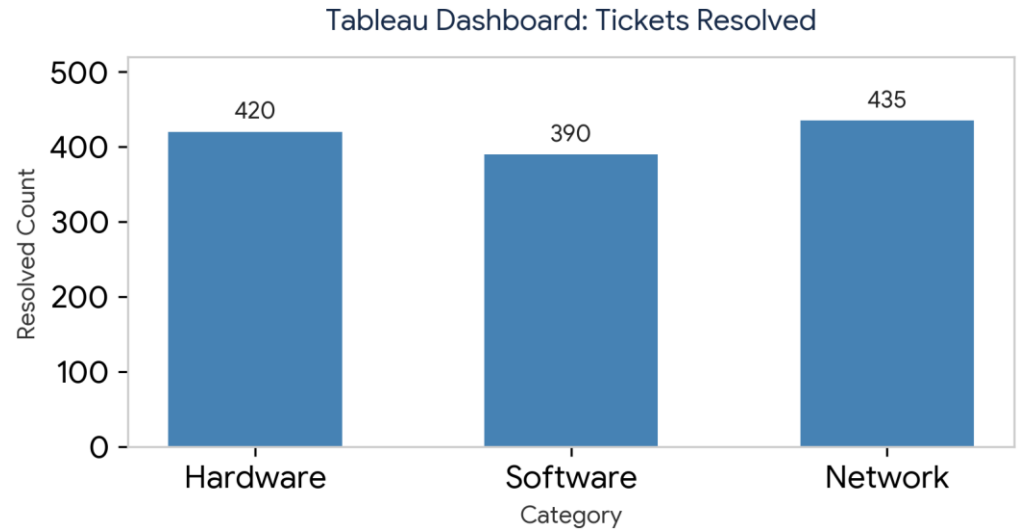

Figure 1: Tableau Dashboard - Tickets Resolved by Category (Hardware: 420, Software: 390, Network: 435)

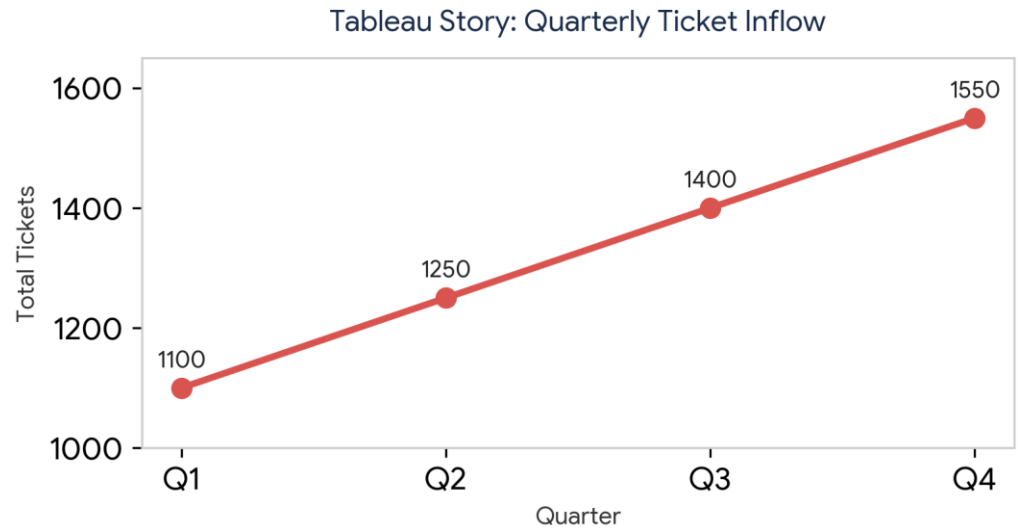

Figure 2: Tableau Story - Quarterly Ticket Inflow Trend (Q1: 1,100 to Q4: 1,550)
